SUMMARY

Computer Engineering graduate with project experience developing Java desktop applications and full-stack web systems. I also have React, Node.js, Express, Prisma, and PostgreSQL project exposure. Seeking a junior software development role. I am looking to join an engineering team that values rigorous mentorship and technical excellence, where I can apply my core fundamentals while leveling up under experienced leadership.

PROJECTS

CASH-G BANKING APP | Final Project | Java, Swing, JDBC, PostgreSQL, JUnit 2026

GitHub: github.com/vmargin/banking-app | Live: banking-app-v2.onrender.com

- Developed a Java banking simulator with registration, PIN login, cash-in, transfers, and transaction history, bringing account operations into one desktop workflow.
- Implemented JDBC transactions for balance changes and paired transaction records, allowing transfers to commit together or roll back on failure.
- Organized feature delivery through GitHub issues, acceptance criteria, and JUnit checks, linking application rules to defined tasks and repeatable tests.

ARCTIC - AIRCON SERVICE MANAGER | Client Project | TypeScript, React, Express, Prisma, PostgreSQL 2026

GitHub: github.com/vmargin/aircon-service | Live: aircon-service-frontend.vercel.app

- Gathered requirements from a four-branch air-conditioning company and mapped its booking-to-invoice workflow, translating staff operations into system requirements.
- Defined organization and branch access requirements, booking transitions, and payment rules, giving implementation explicit rules for staff scope and job progression.
- Led requirements, data-model design, and deployment work with AI-assisted implementation, translating the service workflow into booking, invoice, and audit-log features.

MULTI-TENANT ASSET MANAGER | Personal Project | React, Express, Prisma, PostgreSQL 2026

GitHub: github.com/vmargin/multi-tenant-asset-manager | Live: multi-tenant-asset-manager.vercel.app

- Developed organization-scoped asset queries and writes, applying organization identifiers to listing, update, and delete operations.
- Modeled organizations, users, assets, and categories with PostgreSQL constraints and Prisma migrations, defining relationships and a repeatable database setup.
- Configured the React frontend, Express API, and PostgreSQL database for local and hosted environments, supporting development and deployment from the same project.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, SQL, HTML, CSS
Frontend: React, Vite, Tailwind CSS, TanStack Query
Backend: Node.js, Express, REST APIs, JWT, bcrypt, Zod
Database: PostgreSQL, Prisma ORM, JDBC, Supabase, Database Migrations
Testing & Build: JUnit, Maven,
Tools & Deployment: Git, GitHub, Docker, Vercel, Postman, pgAdmin

EDUCATION AND CERTIFICATION

POLYTECHNIC UNIVERSITY OF THE PHILIPPINES Sta. Mesa, Manila

BS Computer Engineering 2020

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Advanced Java Programming, Relational Database Management, Software Engineering

JAVA PROGRAMMING NCIII – TESDA |Completed 2026

CIICC, Quezon City

AWS CLOUD QUEST: CLOUD PRACTITIONER |Completed 2026

Supervised Industry Learning (SIL) – Spring Valley
